

WEB-BASED SOLUTION FOR MANAGING INFORMATION  
TRADITIONALLY MANAGED WITHIN PRIVATE  
ELECTRONIC ENVIRONMENTS

Abstract of the Disclosure

5           One or more aspects of managing information that were  
previously performed within a private electronic environment  
are now performed within a public electronic environment  
off-line from the private environment. This allows the  
information to be managed at a location that is  
10 user-friendly, and relaxes the requirement for a synchronous  
connection to the private environment. One example of  
information managed in this manner is a proposal for a  
contract, such as sales contract.
